

Introduction

Recently, Google unveiled Gemini, its cutting-edge AI model. Gemini stands as another Large Language Model designed with robust multimodal capabilities. This new LLM asserts superiority over its rival GPT-4 across various fronts. It comes in three variants: Nano, Pro, and Ultra.

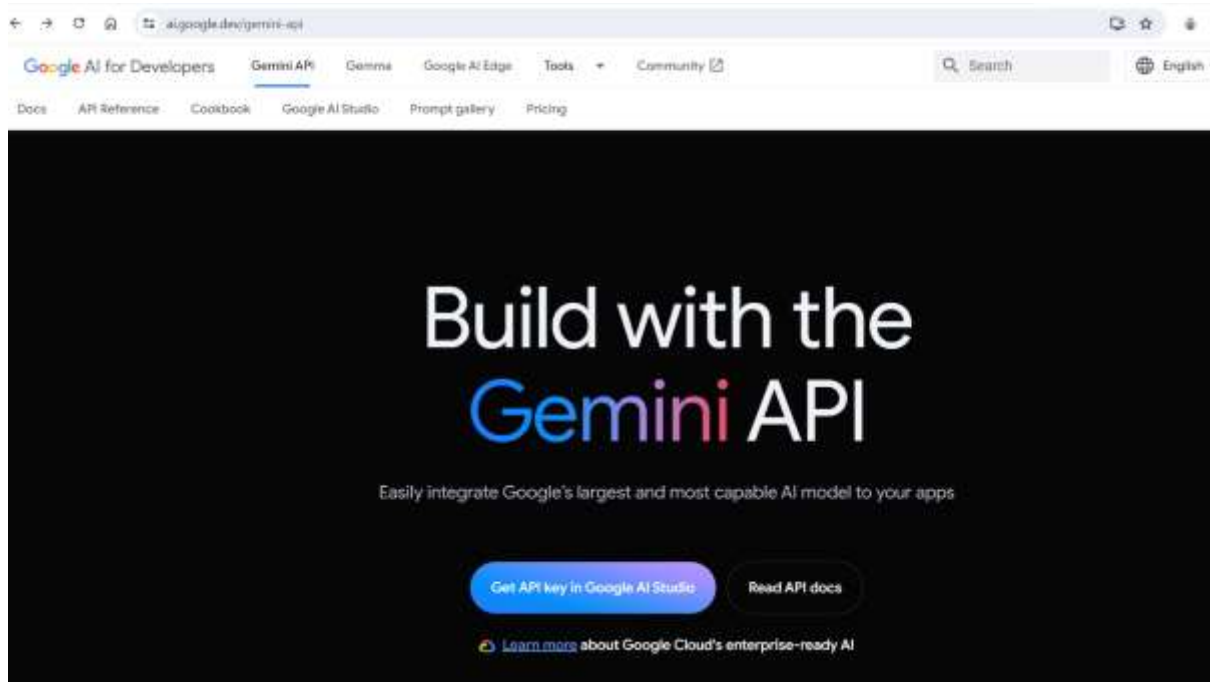

The Gemini API became accessible to developers on December 13th. Please use the default free of charge plan and don't any payment methods and avoid billing for the project 😊

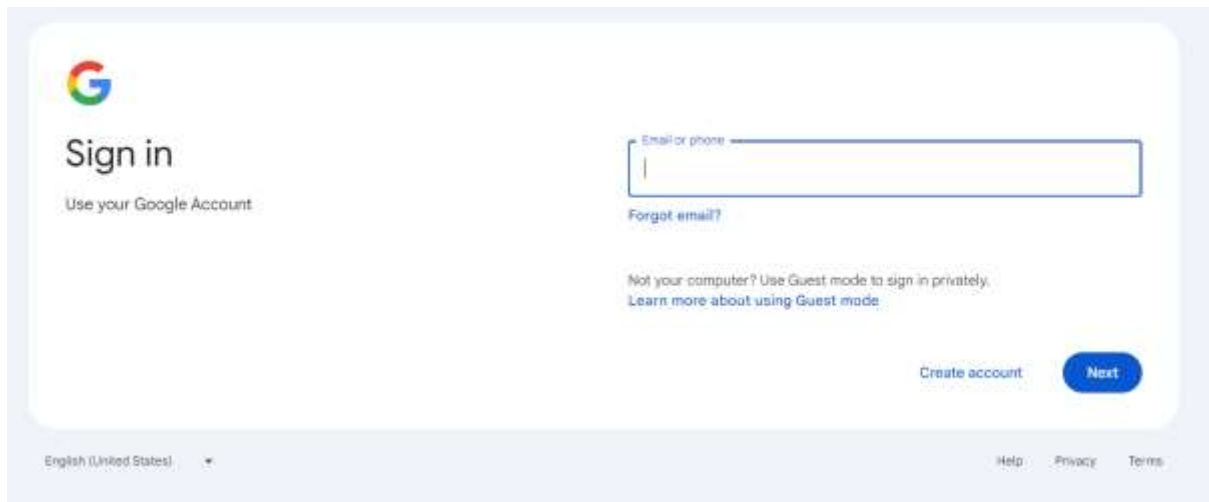

Generating the Gemini API Key

The initial step is to create an API key that you'll utilize later. Follow the steps below to generate it.

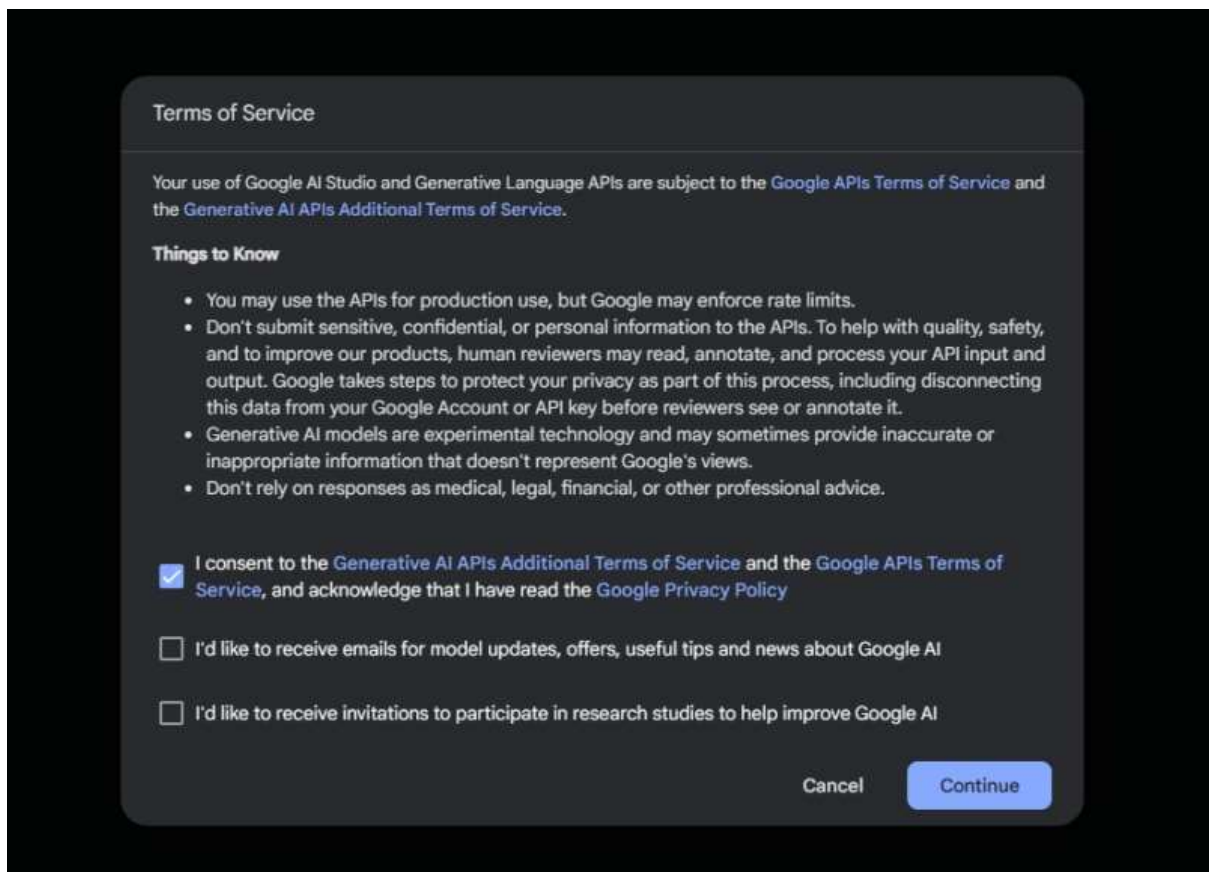

Step 1: Please navigate to the [Google AI for Developers](#) page and click on the **Get API key in Google AI Studio** button.

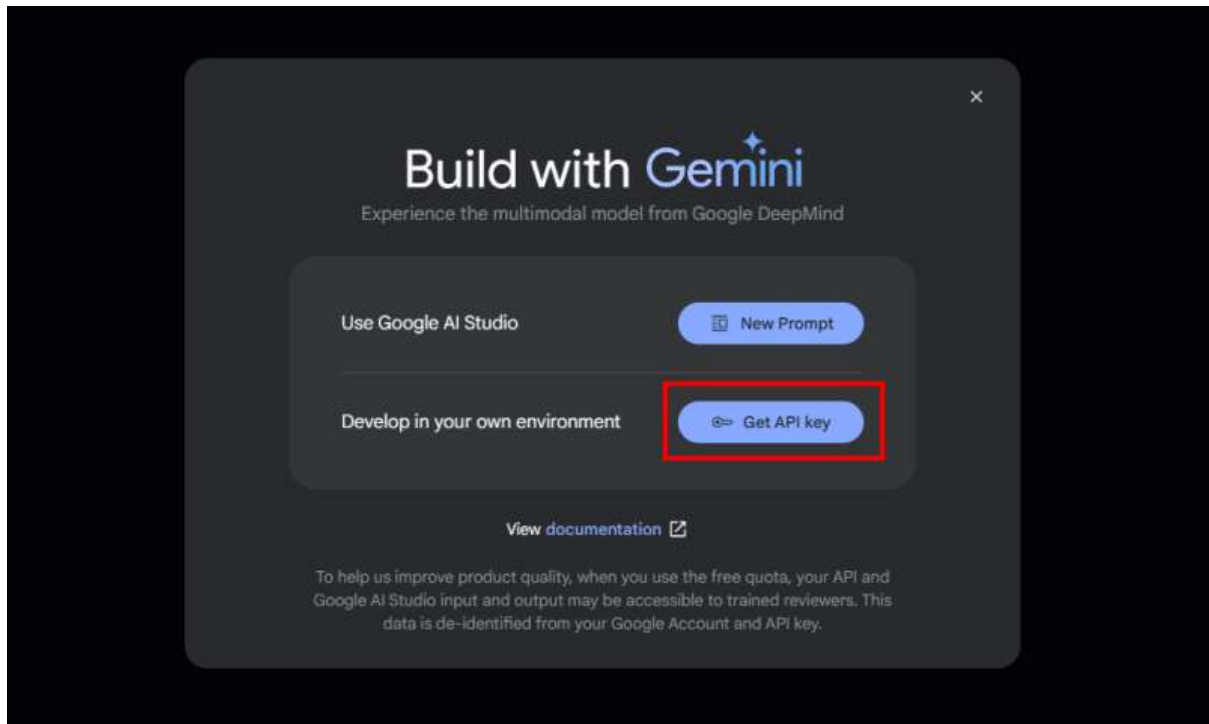

Step 2: On the following screen, Click on 'Get API key in Google AI Studio' and you'll be prompted to log in using your Google account to continue. Once you've successfully signed in, you'll be taken to the Google AI Studio dashboard.

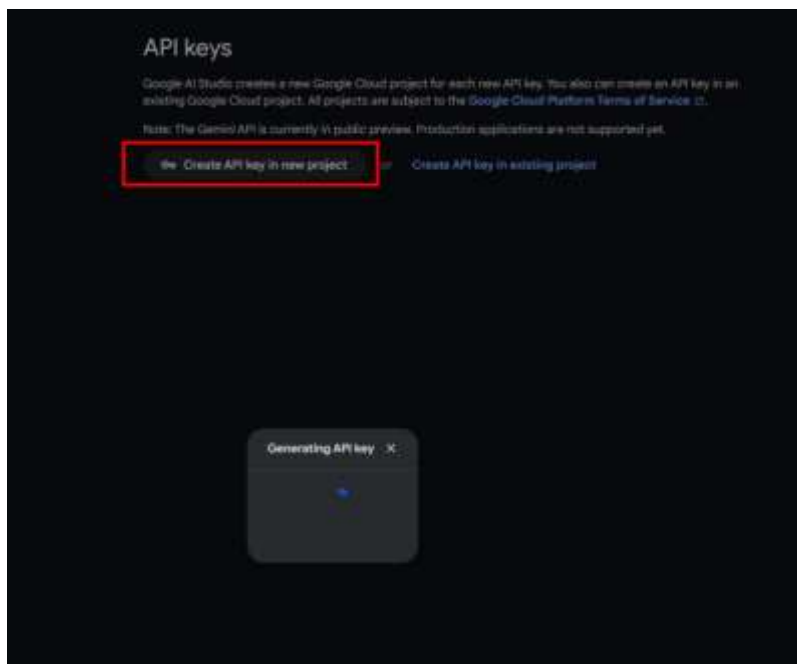

Step 3: If this is your initial login attempt, you'll be prompted to agree to certain terms before proceeding. Simply choose the relevant ones and then proceed by clicking on "Continue."

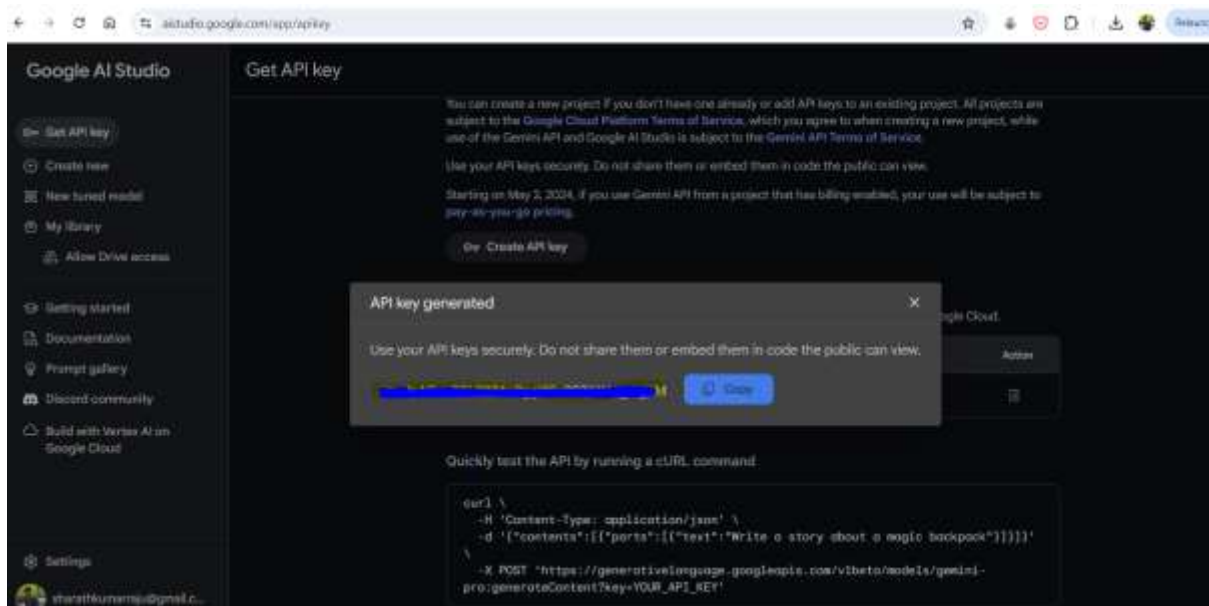

Step 4: Now on the **Build with Gemini** popup, you can click on the **Get API Key** button to proceed forward.

Step 5: Next in the API keys dashboard, now click on the **Create API key in new project** button and wait until the key is generated for you.

Step 6: Now you can copy the new API key from the popup and store it safely so that you can use it later.

All the best!!!
